RG2014

Temperature data logger with external sensor

TO MEASURE  TO KNOW

The RG2014 temperature logger with external sensor enables temperature measurement and monitoring during transport and storage. It has a compact size and includes an additional connector to connect an external sensor to the logger.

The RG2014 temperature logger measures and logs up to 8,000 in a range of -40°C to +99°C (-40°F to +210°F). This makes the temperature logger ideal for extreme temperature measurements during transport.

Accurately measuring temperature during transport helps prevent damage or weight loss. Equipped with built-in features such as a real-time clock that provides date and time stamps for each temperature reading, this temperature logger is ideal for transporting temperature-sensitive products.

The temperature loggers are known for their best download time and accuracy on the market. With a battery life of up to 3 years, you are assured of accurate data.

The advantages of the RG2014 temperature logger include:

- 8,000 measurement points
- Temperature range of -40 ~ +99 °C
- Connection for external sensor
- Battery life of 2 to 3 years at 25-minute intervals
- Adjustable alarm settings and LED indicators
- Robust and durable polycarbonate housing
- No manual measurements

Why use an external sensor?

These data loggers are the best on the market, but unfortunately there are places where a temperature logger cannot measure temperature. When measuring temperatures of liquids, an external sensor is recommended. Place the sensor in the liquid and measure the temperature.

Keeping Goods Longer: This temperature logger monitors transport temperature over short and long distances and is known for its high performance, quality and accuracy. The quality of products, such as wine, fruit and flowers, depends on the ambient temperature. Using the RG2014 provides awareness and ensures product quality and safety.

Easy access to data: When you purchase the temperature logger, you can use the software for free. This program is a platform for configuring, downloading and displaying data from the RG2014 temperature logger. The data can be easily exported to other file data, such as Excel.

The RG2014 data logger comes with an external sensor 40mm and 1.5 meter cable.
