STENTCLIPS

TO MEASURE  TO KNOW

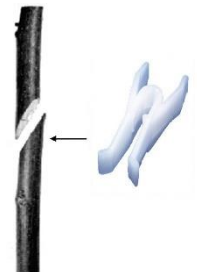

The Stentclips are developed with co-operations of the grafting nurseries. The disadvantages of the existing resources are now belonging to the past with these Stentclips. It is very easy to press the clip open by means of a unique principal (Model SK1100).

Model SK1000

Package per 4.500 pieces ($\pm 13,3$ kg, 60x40x25 cm)

General:

- The Stentclip is small in size (length only 4 cm), this means that the clip will be within the rockwool block and will not be pushed off during transport.
- Can be used for a stent from $\varnothing 3$ till 12 mm.
- The Stentclip has a large clamping surface (± 14 mm) so the gash (the cut) will be covered all over by the Stentclip; therefore the gash will be nicer and better.
- The Stentclip is produced of a high quality synthetic material; the clip will not oxidize and can be used again.

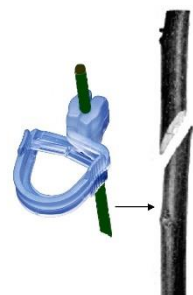

Model SK1100

Package per 5000 pieces ($\pm 10,8$ kg, 60x40x25 cm)

General:

- The Stentclip is small in size (length only $3\frac{1}{2}$ cm), this means that the clip will be within the rockwool block and will not be pushed off during transport..
- Can be used for a stent from $\varnothing 3$ till 12 mm.
- The Stentclip has a large clamping surface (± 14 mm) so the gash (the cut) will be covered all over by the Stentclip; therefore the gash will be nicer and better.
- The Stentclip is produced of a high quality synthetic material; the clip will not oxidize and can be used again.
- It is easy to press the clip open by means of a unique principal.
