LP PHOT 03S**

LP PHOT 03 - LP RAD 03 - LP PAR 03 - LP UVA 03 - LP UVB 03 - LP PHOT 03S
**PHOTOMETRIC AND RADIOMETRIC PROBES WITH OUTPUT SIGNAL IN mV
OR NORMALIZED 4...20mA OR 0...10Vdc OR RS485 MODBUS-RTU OUTPUT**

Photo-radiometric probes with output signal in mV or standard output 4...20mA or 0...10Vdc. The probes of the series LP...03 for outdoor use allow to measure photometric and radiometric quantities such as: illuminance (lux), irradiance (W/m^2) in the near ultraviolet spectral region VIS-NIR, UVA, UVB, and the photon flow across the PAR region (400nm...700nm). The probes with mV output do not require any power supply. The output signal is obtained from a resistance that short-circuits the terminal of the photodiode. The ratio of generated photocurrent to incident light power is converted into a Difference of Potential that can be read by a voltmeter. Once the DDP (Difference of Potential) is known, the measured value can be calculated through the calibration factor. All probes are individually calibrated and the calibration factor is also shown on the probe housing. The probes with normalized output current 4...20mA or voltage 0...10Vdc or RS485 MODBUS RTU output require external power supply. The probe LP UVB 03 is available only with standard output voltage 0...5Vdc and requires external power supply. All probes of the series LP...03 are equipped with diffuser for cosine correction and protection dome. M12 male 4-pole connector (M12 B-pole connector for the LP UVB 03). Cables with female connectors and with 2, 5 or 10m length available on request.

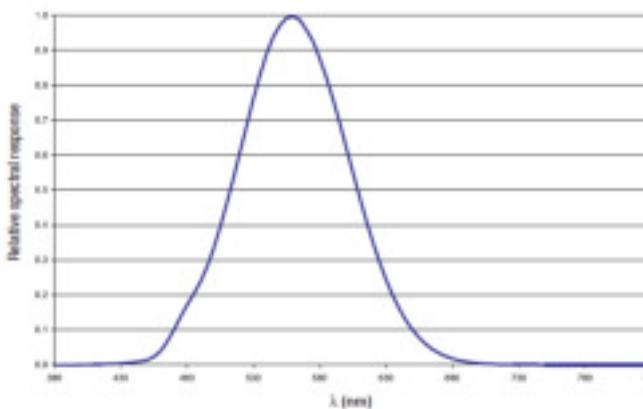

LP PHOT 03

The probe LP PHOT 03 measures illuminance (lux), defined as the ratio between the luminous flux (lumen) passing through a surface and the surface area (m^2). The spectral response curve of a photometric probe is similar to the human eye curve, known as standard photopic curve $V(\lambda)$. The difference in spectral response between LP PHOT 03 and the standard photopic curve $V(\lambda)$ is calculated by means of the error F_v . Calibration is carried out by comparison with a reference luxmeter, calibrated by a Primary Metrological Laboratory. The Calibration Procedure complies with the CEI publication No.69 "Methods of characterizing illuminance meters and luminance meters: Performance characteristics and specifications, 1987". The photometric measurement probe is designed for outdoor readings. CIE photopic filter. Cosine correction filter and K5 glass dome. Output, according to the chosen configuration, mV or normalized output 4...20mA or 0...10Vdc.

TECHNICAL SPECIFICATIONS:

Typical sensitivity:	0.5...1.5 mV/klux
Spectral range:	$V(\lambda)$
Calibration uncertainty:	< 4%
F_v (agreement with the standard curve $V(\lambda)$):	<8%
f_z (Cosine response):	<3%
f_z (linearity):	<1%
Operating temperature:	-20°C...+60°C
Impedance:	0.5...1.0 kΩ non-normalized version
Version with normalized output 4...20mA:	4mA = 0 klux, 20mA = 150 klux
Version with normalized output 0...10Vdc:	0V = 0 klux, 10V = 150klux
Power supply:	10...30Vdc for version with normalized output 4...20mA 15...30Vdc for version with normalized output 0...10Vdc

Typical spectral response curve of LP PHOT 03:

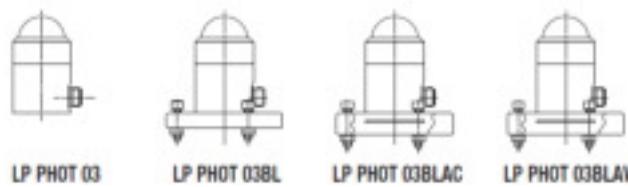

ORDERING CODE

LP PHOT 03: Photometric probe for the measurement of illuminance, complete with K5 dome, silica gel cartridge, female 4-pole connector, calibration report. **Cable with female connector has to be ordered separately.** Cables: CPM12 AA4 ...with cable length 2, 5 or 10 meters.

LP PHOT 03 = mV / lux.
03BL = mV / klux output, base with levelling device
03BLAC = base with levelling device output 4...20 mA
03BLAV = base with levelling device output 0...10 V

CABLE:
CPM12 AA4 2 = length 2m
5 = length 5m
10 = length 10m

TECHNICAL SPECIFICATIONS

Typical sensitivity:	-6V/W/m ²
Typical spectral range:	301nm...308nm (1/2) 295...308.5nm (1/10) 290...311.5nm (1/100)
Peak at 304nm:	
Calibration uncertainty:	<6%
f _d (cosine response):	<6%
f _l (linearity):	<1%
Working temperature:	-20...+60°C
Output:	0...1W/m ²
Power supply:	15...30Vdc

LP UVA 03, LP UVA 03BL

Connector	Function	Color
1	Positive (+)	Red
2	Negative (-)	Blue
3	Not connected	White
4	Shield	Black

LP UVA 03BLAV

LP UVA 03BLAC

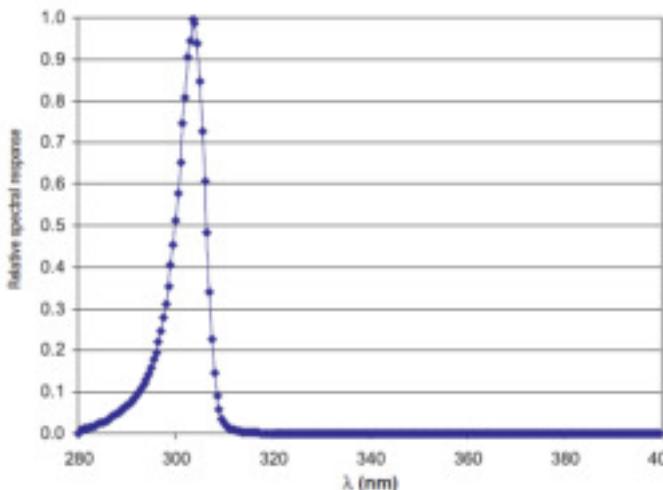

Connector	Function	Color
1	Positive (+)	Red
2	Negative (-)	Blue
3	Not connected	White
4	Shield	Black

LP UVB 03BLAV

The LP UVB 03BLAV probe measures global irradiance (W/m²) on a surface area (m²) in the UVB (280 nm...315 nm) spectral region. In particular, the spectral sensitivity is focused at 305 nm, with a bandwidth (FWHM) of 5nm. The global irradiance is the result of the sum of direct solar irradiance and of diffused irradiance incident on a planar surface. In the UVB spectral region, unlike in the visible portion where the direct component prevails over the direct component, the light is strongly diffused by the atmosphere and thus the two components are equivalent, therefore it is very important that the instrument is capable of measuring accurately both the components. The probe is designed for outdoor readings. Cosine correction filter and Quartz dome.

Typical output 0...5Vdc.

Typical spectral response curve LP UVB 03BLAV

ORDERING CODE

LP UVB 03BLAV: Radiometric probe for the measurement of the UVB irradiance, complete with Quartz dome, 3 silica gel cartridges, 8-pole M12 connector, calibration report. Cable with female connector has to be ordered separately. Cables: CPM12 AA8 ..., with cable lengths 2, 5 or 10 meters.

LP UVB 03BLAV = 0...5 V, complete with levelling device

CABLE:

CPM12 AA8 2 = length 2m
5 = length 5m
10 = length 10m
